Phishing and Training & Awareness

elmdaleit.co.uk

Phishing emails are on the rise

With more staff working remotely and attackers becoming smarter, it's no surprise to learn that successful phishing attempts are on the increase.

86% of organisations have experienced a phishing attack. Phishing is one of the most successful, and easiest forms of cyberattack for criminals to carry out and many organisations are coming up short when protecting against modern email threats. Phishing attacks targets human, rather than technical, vulnerabilities and the consequences can be severe to an organisation, data and users. Whilst many cybersecurity professionals are aware of common email threats like phishing, it's important to also consider the increase in sophisticated attacks such as spear phishing, business email compromise, and other inbound threats.

Your employees are your greatest defence against phishing, especially the tailored attempts. Phishing Awareness and Simulation Training from Elmdale IT can significantly reduce the risk of an attack - because employees who can learn to recognise a phishing attempt can help stop the attack at source.

Make a difference with Regular Phishing Simulations

As part of user security awareness, regular phishing simulations enable employees to understand the dangers of social engineering, detect potential attacks, and take the appropriate reporting actions to protect the organisation.

It's vital an organisation provides multiple layers of security measures, and a stronger defence against attack combines effective technology with consistent phishing awareness training, ensuring more employees are recognising - and not clicking on - phishing emails.

Phishing emails are not just about impersonation, they are also a way to distribute malware and spyware. With ongoing, targeted training and randomised testing, your employees will be kept vigilant and receive professional learning with the advantage of tailored support as required.

Phishing and Training & Awareness

Phishing Simulation as a Service

Phishing Simulation as a Service from Elmdale IT can significantly reduce the risk on phishing attacks and help organisations drive continuous improvement to their cyber resilience strategy.

The service includes the following:

- Quarterly phishing simulation, suitable for all employees.
- Report and presentation of phishing results, providing user insight and remediation advice.
- Randomised testing with multiple template and landing page options.

Strategic direction on types of phishing campaigns, for example:

- Link clicking
- Credential theft
- Attachment opening
- Tailored support and focus on specific departments/people based on risk.

ELMDALE IT TRAINING PLATFORM

Elmdale IT Training Platform empowers employees with knowledge and skills to stay cyber secure at work and home.

More than 80% of all cyber-incidents are caused by human error. Enterprises lose millions recovering from staff-related incidents - but the effectiveness of traditional training programs intended to prevent these problems is limited, and they generally fail to inspire and motivate the desired behaviour. Whilst many companies implement security awareness programs, not many of them are happy with both the process and the results. Small and medium businesses, which usually do not have the experience and dedicated resources, are particularly challenged.

Our state-of-the-art training platform helps to prepare your employees with industry-leading security awareness training so they're ready when a real attack occurs.

The training software solution provides personalised security awareness and anti-phishing training to help you engage every employee, keep education relevant and deliver training automatically to those who need it most.

With your dedicated training manager working with your internal training team, we are able to design, distribute and then report on the progress of your tailored training program. **With over 2000 learning resources at our fingertips**, we can design you a fully embedded 12-month training programme or a sharp and swift targeted campaign, reacting to the changing in cyber security landscape.

Security Awareness & Training for everyone

Personalise employee training with role-based modules in a variety of themes, styles and lengths to engage learners.

Automate phishing simulations, training cadence and delivery to keep lessons relevant, challenging and fun - and save you time

Integrate with your endpoint protection, LMS and SOC to streamline program management, reporting and attack response.

Analyse employee risk scores, learning outcomes and reported phishing threats to anticipate - and remediate - cyberthreats

Improve your program with actionable dashboard data, helping you fill compliance training gaps and educate high-risk employees

**Safeguard your
digital frontier with
confidence.**
